Prognosesenteret was founded in 1978, as an independent consultancy focusing on market research within the Nordic building and construction markets. Today we work as a cross-border Nordic company. Prognosesenteret AS is Norway's representative in EUROCONSTRUCT and Prognoscentret AB represents Sweden.

With more than 25 years of experience, a consulting team consisting of economists, business analysts, psychologists and engineers, we are the leading Nordic company in our field. We are offering regular research services along with individual clients'

projects, as well as the unique "Building Materials Barometer", where we are covering the market of 600 different building materials.

We are offering a wide spectre of services for companies within or related to the Nordic building construction market. Based on a customised web-solution, we are able to offer a month to month analysis of the economic outlook for the Nordic area (per country), as well as markets trends with respect to the monthly building and construction activity in each country. By using our frequently updated database (which contains data from 1981 and forwards), and regular market analysis, we update our forecasts twice a year. These forecasts include:

- The market for new residential building activity
- The market for new non-residential building activity
- The market for maintenance of residential building activity
- The market for maintenance of non-building activity

All of the mentioned analysis and forecasts are available for Sweden, Norway, Denmark and Finland. Furthermore, they are divided into several building types, such as industrial buildings, commercial buildings, hotel buildings, detached houses, semi-detached houses and row houses etc. In addition, for Norway we also offer analyses of the civil engineering market.

As a part of our full service package, we also do analysis on the consumer behaviour related to various building markets. This analysis is built on question schemes to more than 18 000 households in Norway, Sweden and Denmark, in order to identify trends within the DIY market.

Further on, Prognos centret is offering a unique service, giving detailed data on the consumption of construction materials and services in the Nordic region. This service is called "Building Materials Barometer", and it is a databank containing more than 600 products and services. The database is updated yearly, based on registration of end-use consumption.
